This is to certify that the Energy Management System of
SHENZHEN AIDISPLAY CO., LTD.

Shenzhen Aidisplay Co., Ltd. (hereinafter referred to as "the company")

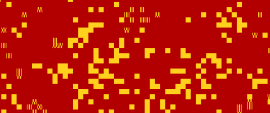

has been certified by the

Energy Management System (EMS) is a system that can monitor, control, and optimize the energy consumption of a building or industrial facility. It can help reduce energy costs, improve energy efficiency, and reduce greenhouse gas emissions.	The EMS is a software system that can be installed on a computer or a server. It can be used to monitor and control the energy consumption of a building or industrial facility. It can also be used to optimize energy consumption and reduce energy costs.	The EMS is a software system that can be installed on a computer or a server. It can be used to monitor and control the energy consumption of a building or industrial facility. It can also be used to optimize energy consumption and reduce energy costs.	The EMS is a software system that can be installed on a computer or a server. It can be used to monitor and control the energy consumption of a building or industrial facility. It can also be used to optimize energy consumption and reduce energy costs.
The EMS is a software system that can be installed on a computer or a server. It can be used to monitor and control the energy consumption of a building or industrial facility.
